

Project Manager's Guide

Platform overview · Roles · Workflows · Architecture
Internal Reference Document

1. Role Definitions & Permissions Matrix

The platform uses **Role-Based Access Control (RBAC)**. Every user is assigned a specific role that dictates their visibility and action limits.

Role	Responsibility	Key Permissions
CEO	Global oversight	Full access; Delete anything; Manage all wallets.
Admin	System operations	Manage users; Approve withdrawals; Register external products.
Manager	Department lead	Approve applications; Create/Assign projects & tasks; Schedule meetings.
Member	Project execution	View assigned tasks; Update work status; Request payouts.
Client	Service hiring	Request projects; Participate in meetings; Pay for services.
Applicant	Waiting to join	View departments; Submit membership application.

2. The Client Journey: Navigation & Access

A. Onboarding

1. **Sign-up** - The client registers at `/auth/register`.

2. **Activation** - An Admin validates the client and upgrades their role from Member to Client via the User Update endpoint.

B. Navigating the Dashboard

- **Project Request:** Clients access the Hire Us section and submit a Project Request (Budget, Description, Deadline).
- **Meeting Room:** Clients see scheduled video/audio consultations and receive a Join link when a session is active.
- **Active Projects:** A dedicated view showing progress and a list of high-level task completions.
- **Billing & Payments:** Clients see Invoices, click Pay Now to reach Stripe Checkout, and projects are marked Completed via Webhooks.

3. The Core Business Workflow

Phase 1: Sales & Onboarding

1. User Flow: Applicant → Registration → Application Submission → Manager Review → Approved Member.
2. Client Flow: Registration → Admin Approval → Project Request submission.

Phase 2: Project Management

1. Discovery: Manager sees a new project request and schedules a Meeting.
2. Assignment: Manager sets project to Active and assigns a Team (Members) and a Lead (Manager).
3. Execution: Manager breaks down the project into Tasks and assigns them to Members.
4. Notifications: Every assignment triggers a WebSocket notification and an Email to the Member.

Phase 3: Financial Settlement (The Engine)

1. Completion: When the project is finished, the Client pays.
2. Payout Logic: 70% distributed to the working team wallets; 30% retained in Company Treasury.
3. Withdrawal: Members request funds, which an Admin then approves and processes.

4. Technical Architecture

The codebase is built on a **Modular Micro-Services** approach.

A. The API Layer (FastAPI)

Location: /app/api/v1/endpoints/

Each file represents a business domain (e.g., projects.py, wallets.py). Handles security, input validation, and database communication.

B. The Database (PostgreSQL & SQLAlchemy)

Location: /app/db/

Stores everything: user profiles, financial transactions, project statuses, and encrypted password hashes.

C. The Task Engine (Celery & Redis)

Location: /app/tasks/

Handles background processing: profit splits, bulk emails, Stripe webhooks. Redis acts as the messenger between the API and Task Engine.

D. Real-time Communication (WebSockets)

Location: /app/core/notifications.py

Provides instant updates. When a Manager clicks Approve, the Member's screen updates immediately.

5. Summary for PMs

- **Trust the Status:** A project only triggers payouts when its status hits completed.
- **RBAC is Key:** If a user cannot see something, check their role in the users table.
- **Auditable:** Every cent moved is recorded in the transactions table - never delete rows, always soft-delete or update status.

6. Detailed Client Dashboard Navigation (UI Walkthrough)

Top Navigation Bar

- **Dashboard:** Overview of total projects and spending.
- **Hire Services:** Button to trigger the Project Request form.
- **Meetings:** Calendar view of scheduled sessions.
- **Invoices:** List of pending and paid invoices.

Project Detail View

- **Progress Tracker:** Visual indicator - Pending → Active → Completed.
- **Team List:** Names and roles of assigned TitanCode members.
- **Deliverables:** Links to files uploaded by the team.

Interaction Flow

Step 1: Client fills in a form (Name, Description, Budget).

Step 2: Client receives a notification when a Manager is assigned.

Step 3: Client clicks Join Meeting directly from their dashboard.

Step 4: Upon project completion, a Pay & Finalize button appears, linking to Stripe.
